Advances in Systems, Control and Automation

ETAERE-2016

Series: Lecture Notes in Electrical Engineering, Vol. 442

- ▶ **Presents in-depth analytical findings on linear and nonlinear control systems**
- ▶ **Covers recent advancement in automated and intelligent systems**
- ▶ **Explores the possibilities in solving real-life machine-oriented problems**
- ▶ **Focuses on both modeling and hardware applications**
- ▶ **Highlights recent technological development in medical electronics**

This book comprises the select proceedings of the ETAERE 2016 conference. The book aims to shed light on different systems or machines along with their complex operation, behaviors, and linear–nonlinear relationship in different environments. It covers problems of multivariable control systems and provides the necessary background for performing research in the field of control and automation. Aimed at helping readers understand the classical and modern design of different intelligent automated systems, the book presents coverage on the control of linear and nonlinear systems, intelligent systems, stochastic control, knowledge-based systems applications, fault diagnosis and tolerant control, real-time control applications, etc. The contents of this volume will prove useful to researchers and professionals alike.
